

Development

Nonpoint

Spoken: The life cycle of a Sally Henshiena Norman
Commonly known as the frog
Can be broken down into several developmental stages
Each stage presents new challenges
We begin our study now with the first stage of development
Music: Now
There's a crack on the inside
And I start to play
Now
My finger's stuck
Over stood my stay
Now, Now, Now
My world is bent
From this development
(this development)
Moving faster, than a
Storms rain after
The Plaster split
Where my fingers fit
Sure disaster
And growing faster
Than my skin can take
Least that's what they say
Now
There's a crack on the inside
And I start to play
Now
My finger's stuck
Over stood my stay
Now, Now, Now
My world is bent
From this development
(this development)
Crowded cluster
Do you trust her
To take the weight
Or make the change
Abandoned labor
Do yourself a favor
and do for you
Not what you're used to
Now
There's a crack on the inside
And I start to play
Now

My finger's stuck
Over stood my stay
Now, Now, Now
My world is bent
From this development
This development
(this development)No more sanity
I can't stay here
Too many, many bad choices, choices
No more space to breath
I can't stay here
Too many, many damn voices, voicesNow
There's a crack on the inside
And I start to play
Now
My finger's stuck
Over stood my stay
Now, Now, Now
My world is bent
From this development
This development
This development
